Our Product

Product Description:

The prefab container house is a convenient and cost-effective solution for your home, business, or office needs. It is made of durable and lightweight materials such as aluminum alloy window, sandwich panel, and steel, with a variety of optional decorations for a personalized touch. It is available in two sizes: 20ft and 40ft, and is designed to be completely waterproof for the whole house. The prefab container house is the perfect choice for those who want a safe and reliable prefabricated home or office without breaking the bank.

Features:

Low construction cost: Compared with traditional brick-concrete structure houses, the construction cost of container houses is lower. This is because containers can be produced in a production line and can be stacked together during transportation, reducing transportation costs and space occupancy.

Strong durability: The main structure of the container house is composed of steel materials, which has very strong durability and wind resistance and earthquake resistance. At the same time, the shell of the container house is treated with special anti-corrosion treatment to prevent rust and corrosion.

Strong spatial plasticity: Because the size and shape of the container house can be adjusted according to needs, it has strong spatial plasticity. The area of the house can be extended or reduced by splicing, stacking, etc.

Simple and fast: the construction speed of container houses is very fast, and it can be completed after several links such as prefabrication, processing, and assembly. At the same time, due to its modular design, disassembly and migration are also very convenient.

Environmental protection and energy saving: the materials of container houses can be recycled and reused, and will not produce a lot of construction waste, while energy consumption and carbon emissions can be reduced by improving insulation materials and adopting new energy equipment.
